# Data Preservation

Combine Python's dynamic
typing with ROOT's embedded
streamers to access any data
structures without the original
header files/object libraries.

Physics Analysis

Complete Numpy
integration for
accessing machine
learning libraries,
convenience of
Python backed by
fast, compiled code.

My Research

A codebase that I can control and
quickly modify to test new modes of
data access, such as object stores,
database-style indexing, query servers.
